SERVICE NOTE: When replacing the tub heaters, it is **HIGHLY** recommended that you also change out the gasket as well. Once install, gaskets become compressed and are subjected to extreme temperature changes. Replacing the gasket with a new one when replacing the heater may prevent future leaks.

SERVICE NOTE: The nuts used to secure the heater to the tub should be torqued to 16 in-lbs. After tightening, the unit should be allowed to heat up and operate normally for approximately 30 minutes. Secure power to the machine and check the nuts once more to ensure that they are torqued to 16 in-lbs.

SECTION 5: PARTS SECTION

TS-44/66 & TSC-44/66 HEATER BOX ASSEMBLY (CONTINUED)

BUS BAR AND LEAD LOCATIONS FOR WASH HEATER TO BE WIRED FOR 3 PHASE AC.

BUS BAR, JUMPER WIRES AND LEAD LOCATIONS FOR WASH HEATER TO BE WIRED FOR 1 PHASE AC.

The wash tank heater system is electrically connected in the circuit so that they are dependent upon the dishwasher being properly filled with and maintaining a safe water level, two thermostats (mounted in the heater box behind the dress panel), float switch (mounted in the wash tank), and the heater relay (mounted in control box) with the heater being activated by the thermostats.

Once the dishwasher has been filled to the correct level, the heater should operate automatically. Should the tank heat be too high, too low or no indication of temperatures at all, the following checkout should be made.

Note: The following checkout should be made by either a qualified service person or electrician.

A- Checkout of the heater system

- 1- If the temperature is too high, adjust thermostat using instructions in the section entitled "Thermostats".
- 2- If temperature is too low, adjust thermostat as above, then:
 - a - Turn off power to machine by placing customer's circuit breaker in the "OFF" position. Turn off machine circuit breaker located on right side of control box.
 - b - Remove cover from control box on top of dishwasher.

SECTION 5: PARTS SECTION

TS-44/TSC-44 HEATER BOX ASSEMBLY (CONTINUED)

- c - Make sure water temperature is below 140°F.(preferably about 130°F).
- d - Turn on both circuit breakers. Observe heater relay (R1) while the power switch is turned "ON" and "OFF". If relay contacts move in and out, the heater relay is operating correctly: if not proceed to "C".

B- If heater relay (R1) closes:

- 1 - Check power supply at incoming terminal board L1, L2 & L3. It should be the same voltage as indicated on the machine data plate.
- 2 - Check power at connections on heater relay (R1). The voltage should agree with the voltage on the machine data plate. If not, check wires for breaks or bad connections.
- 3 - Check power at terminals of heater which should agree with the data plate. If not check wires for breaks or bad connections.
- 4 - Temperatures should rise as explained in "C-1", and amperage may be checked according to those instructions. Replace any defective elements.

C - If heater relay (R1) does not close.

- 1 - There is an insulated movable insulated movable bar on relay across the top. With an insulated probe, depress this bar and observe the thermometer: the temperature should rise noticeably in a minute or two. If it moves slowly, it would indicate that the element is faulty. If it moves constantly higher at a good rate, elements should be good.

Note: A check with an amp probe at heater relay (R1) terminals should be made to verify the amp draw on each leg. This should be appropriate for the voltage and phase indicated on the data plate.

HEATER PROTECTION & AUTOMATIC FILL

This control is activated when the power switch is turned "ON". The primary function is to automatically energize the wash tank heat circuit. It will also cutoff the wash tank heat circuit should the water be accidentally drained from the machine with the power switch still "ON". The power switch should always be turned-off before draining the unit.

This water level control consists of two (2) floats that operate when the power switch is turned on and works in conjunction with the thermostats and heater relays.

When the power switch is turned "ON" water starts to enter the dishmachine. When it reaches the proper level the normally open contacts in the water level float switch close activating the heating circuit for tank heat.

If the water level below the correct level while power is still on, the float switch will sense the lack of water and de-activate the heater.

THERMOSTATS

The thermostat range is from 140°F to 240°F with a maximum bulb exposure temperature of 300°F.

Calibration:

Wash Thermostat: Set Point: 165°F (Adjustable range)

Hi-Limit Thermostat: Fixed set point: 210°F (Non-adjustable)

The hi-limit thermostat is used to protect the heater element in the event of a run away regulating thermostat or a dry fire situation. It is set for 210°F +0°F or -10°F with a fixed set point. **This part is not adjustable.**

The wash tank regulating thermostat will maintain the correct wash water temperature to meet NSF requirements. These specify that the wash be no lower than 140°F on chemical sanitizing models and no lower than 160°F on hot water sanitizing machines.

RINSE SOLENOID VALVE & VACUUM BREAKER REPAIR PARTS KITS

SPECIAL PARTS

- Solenoid Valve Plunger Kit
 - Includes plunger and spring
 - Part number 06401-003-07-40
- Solenoid Valve Diaphragm Kit
 - Includes diaphragm and o-ring
 - Part number 06401-003-07-41 (1/2" NPT)
- Solenoid Valve 110 Volt Coil and Housing Kit
 - Part number 06401-003-07-43
- Complete Solenoid Valve
 - Part number 04810-100-12-18 (1/2", 110 Volt)

SPECIAL PARTS

- Vacuum breaker repair kit:
 - For 1/2" NPT order 06401-003-06-23
- Complete Vacuum Breaker Assembly
 - Part number 04820-003-06-13 (1/2")

Replacement Kit Notes:

The replacement kit for the pawl bar roller comes with the roller, roller shaft, hardware and locknut as shown.

Associated Hardware:

Washer, 1/4"-20 I.D.

05311-174-01-00

Locknut, 1/4"-20 S.S. Hex w/Nylon Insert

05310-374-01-00

Pawl Bar Gutter Weldment Replacement Kit
06401-003-09-95

Drive Gutter Gasket
05330-011-68-55

Top Guide Block

Bottom Guide Block

Guide Block Replacement Kit
06401-003-10-15

Replacement Kit Notes:

The pawl bar gutter kit includes the weldment, lock-nuts and the gasket. The guide block kits includes the blocks and the gasket.

Service Note:

Because of wear patterns that develop over time, it is highly recommended that when replacing either of the guide blocks, that the other be replaced as well from the kit.

SECTION 5: PARTS SECTION

SIDE LOADER VENT COWL OPTION

Vent Cowl Replacement Kit (Left to Right)
06401-003-11-81

Vent Cowl Replacement Kit (Right to Left)
06401-003-11-83

Service Note:
One of the side gaskets that come in the kit will need to be cut to length in order to fit properly on the unit when replaced.

Replacement Kit Note:
The replacement kit(s) for the vent cowl(s) come with the cowl(s), the gaskets and mounting hardware.
